

Instructions for use

Catchmaster Bedbug Monitors

Contents of the package:

- Catchmaster monitors for monitoring bed bug infestations

Application:

1. **Unpack and separate:** Carefully open the packaging and remove the bed bug monitors. Detach the individual monitors from the plastic by bending them
2. **Place correctly:** Select areas where bed bugs are frequently found, e.g. under the mattress, in cracks and crevices of upholstered furniture, in suitcases, etc.
3. **Regular checks:** Check the monitors regularly for bed bugs to detect any infestation at an early stage. If bed bugs are trapped in the monitors, you should take further measures to combat the infestation.
4. **Replacing the monitors:** If you use the monitors permanently for preventive purposes, replace them as soon as they lose their adhesive strength or after 12 months at the latest.

IMPORTANT: This product is a passive monitor and not a trap. It is not suitable for combating a bed bug infestation but helps to detect it.

Safety instructions:

- Avoid contact of the adhesive surface with skin and other sensitive surfaces.
- Keep out of reach of children and pets.

Waste disposal:

- Dispose of used monitors and their contents in accordance with local waste disposal regulations.
